Investment Strategy

The Mobius Investment Trust's objective is to deliver long term absolute returns by investing in emerging and frontier market equities. MMIT will identify companies with resilient business models which are undervalued and mispriced. MMIT does not use any benchmark and follows an active investment style by partnering with portfolio companies. This is achieved by engaging with stakeholders to improve corporate governance, set out a broader ESG pathway and act as a catalyst for wider operational and financial improvements.

Investor Profile

The Mobius Investment Trust has no required minimum holding period and is designed for long-term investment (at least five years). It is intended for both institutional and professional investors. MMIT invests in equities and it may therefore be subject to volatility. This requires an elevated risk tolerance and capacity.

Opportunities

- + Focus on dynamic small and mid-sized companies in many of the fastest growing economies in the world
- + Fundamental bottom-up research process identifies resilient business models which are undervalued and mispriced
- + Lower ESG standards in emerging and frontier markets offer a unique opportunity for active engagement approach
- + Create value by delivering a clear ESG pathway for our portfolio companies
- + Concentrated portfolio allows a customised engagement strategy for each company

Risks

- MMIT pursues an active management style. Its performance may therefore deviate considerably from that of a comparable market return
- Pronounced fluctuations in price are characteristic of emerging and frontier economies. Other characteristics include specific risks such as lower market transparency, regulatory hurdles, illiquidity of markets as well as political and social challenges
- Investments via Shanghai or Shenzhen Stock Connect are subject to additional risks, quota limitations, custody risk, clearing/settlement risk and counterparty risk
- Focusing intentionally on stocks in small and medium cap companies may entail additional risks (e.g. lower liquidity)
